- ➢ C/C++, Java, C#, Python
- ➢ Javascript (Scripting Language), Typescript
- ➢ Node JS (Runtime Environment)

Framework & Libraries:
- ➢ Express JS,
- ➢ Django,
- ➢ ReactJS, JQuery, Redux, Redux Toolkit, React Query
- ➢ Socket.io, REST API

Handful Experience:

➤ Complexity Analysis & Optimization
➤ Big Query optimization & Big Data Analysis
➤ Good understanding on vanillaJS & ES6 modern Javascript, raw NodeJS
➤ Clean coding, well maintained folder & file structure
➤ Skilled in version controlling like git

Managerial Skills :

➤ Good communication skills
➤ Building effective team

Projects

Social Media Web Services: https://github.com/jahidhiron/memories

Implemented JWT, Google OAuth authentication & some others social media common functionality using React and NodeJS. Clients are suggested for appropriate post based on keyword.

Find location using web scraping: https://github.com/jahidhiron/find-location-scraper

MERN full stack web service providing necessary functionality to find location with country, state, zip code, longitude, latitude & details address with map.

Netflex Clone: https://github.com/jahidhiron/netflix-clone

This is a MERN full stack project. Interactive UI & admin panel with statistics. Authentication & well authorization are maintained.

Ecommerce: https://github.com/jahidhiron/e-commerce

NodeJs as backend, React for frontend, Redux for state management library, Stripe for payment & mongodb for DB. Google-Firebase is used to upload images.

Uptime Link Monitoring: https://github.com/jahidhiron/uptime-link-monitoring

This is a raw nodeJS project, no NPM, file system for DB, custom auth & token generation & custom Query. A service is created that automatically send response to user for state change like up to down or down to up.

Experience

Binary Bunon : https://www.binarybunon.com [July 2021 – Present]

I am working at Binary Bunon as a Jr Full Stack Web Developer. My role is to build backend API, create business logic & sometimes support frontend using react based on situation.
